AFP1

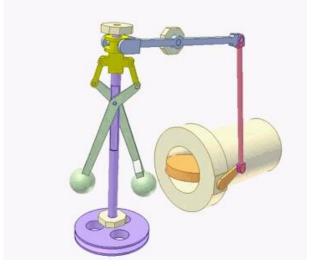

- Docente de teoría:
 - Ing. Emmanuel Vázquez
- Auxiliar de trabajos prácticos
 - Ing. Claudio Lauxmann

Lazo de control

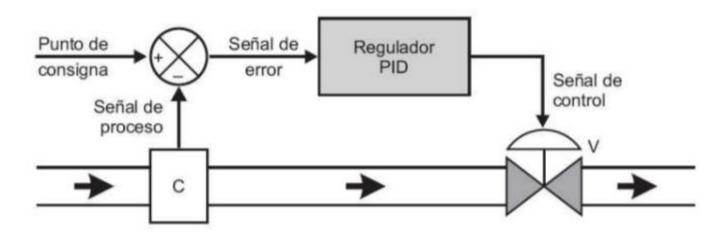

Lazo de control

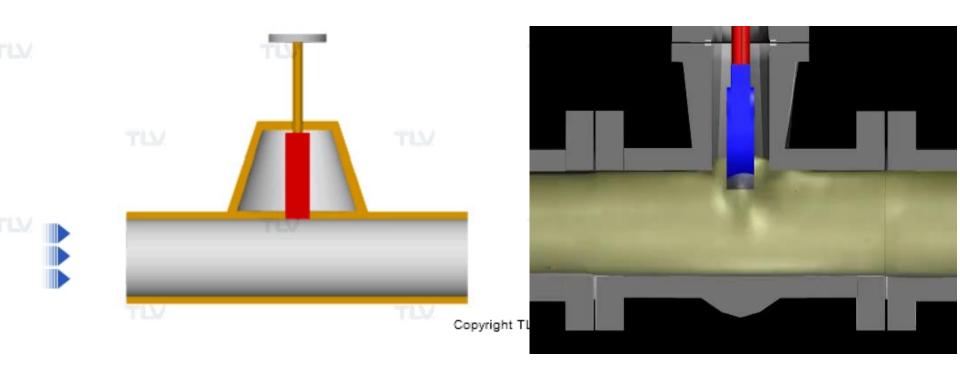

Lazo de control

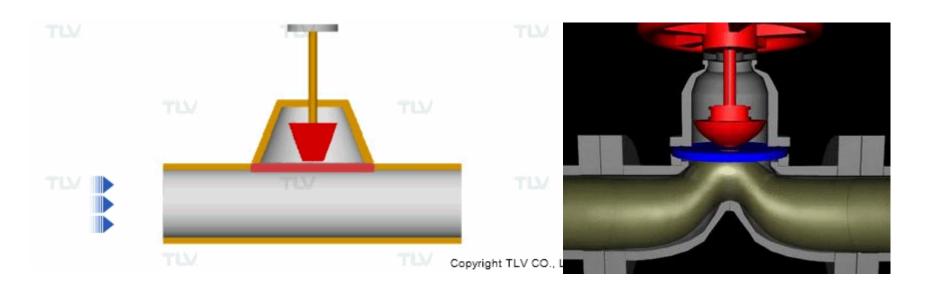

Tipos de válvulas

- Compuerta o esclusa
- Diafragma
- Esférica o bola
- Globo
- Mariposa
- Macho o tapón

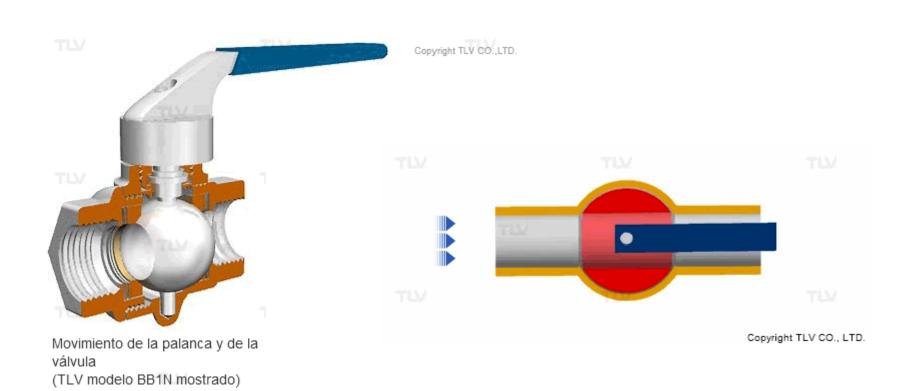

Tipos de válvulas Compuerta o esclusa

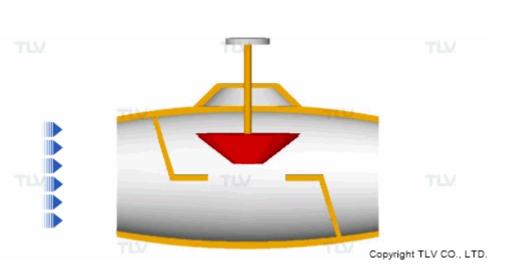

Tipos de válvulas Diafragma

Tipos de válvulas Esférica o bola

Tipos de válvulas Globo. Estrangulación superior/inferior

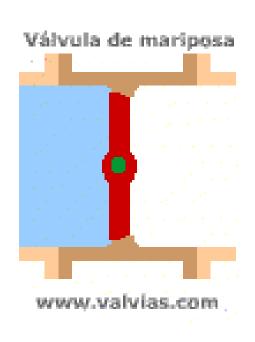

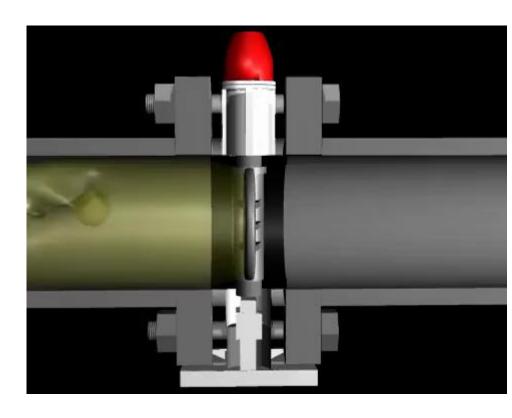

Tipos de válvulas Globo. En Ángulo/Y

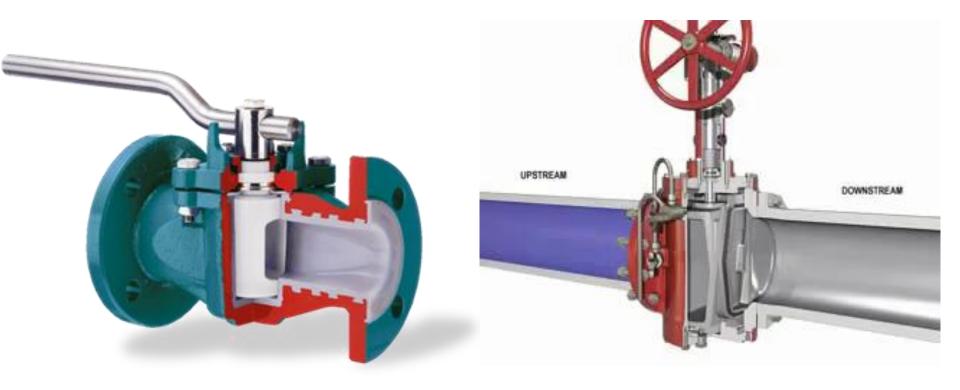

Tipos de válvulas Mariposa

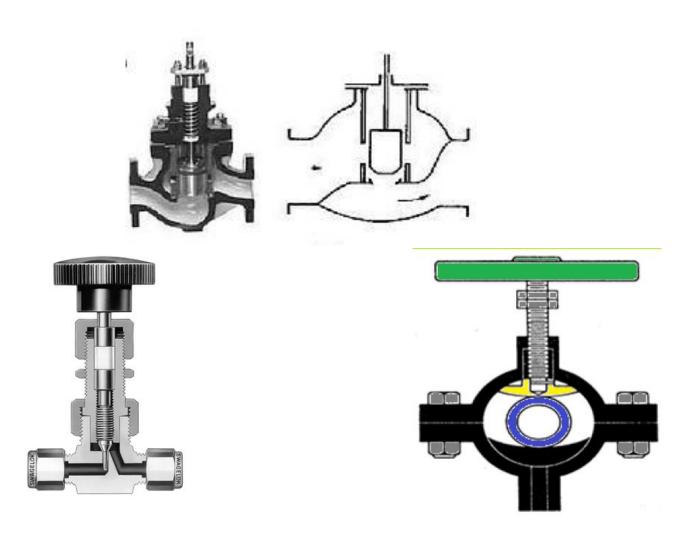

Tipos de válvulas Macho o tapón lubricado.

Tipos de válvulas

Jaula. Aguja. Apriete.

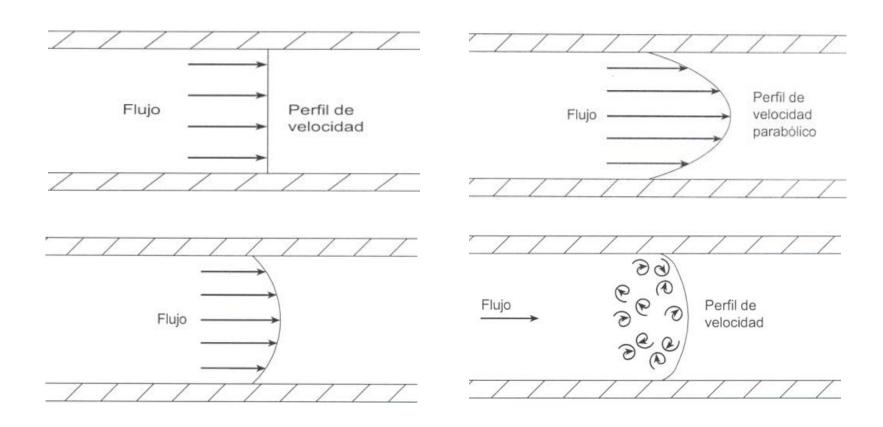

Caudalímetros

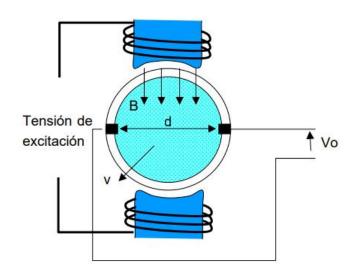

- Magnético
- Ultrasónico
- Tubo Venturi
- Placa orificio
- Tubo Pitot
- Annubar

- Térmico
- A turbina
- Desplazamiento positivo o de lóbulos
- Principio de Coriollis
- Vortex

Caudal

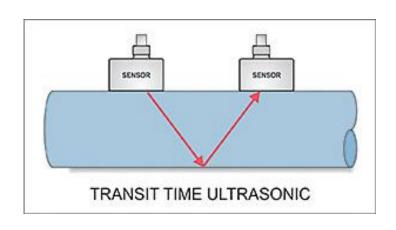

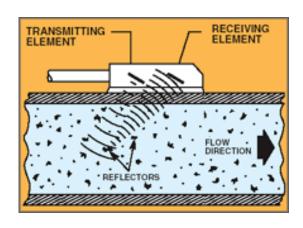

Caudalímetro Magnético

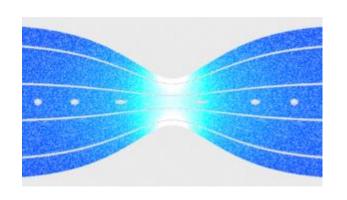

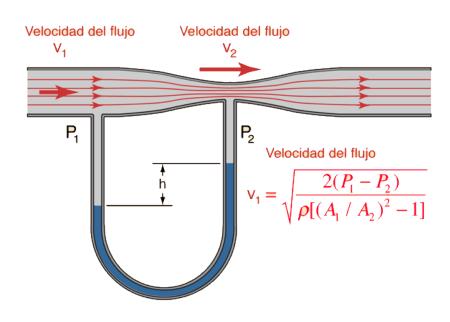

Caudalímetro Ultrasónico

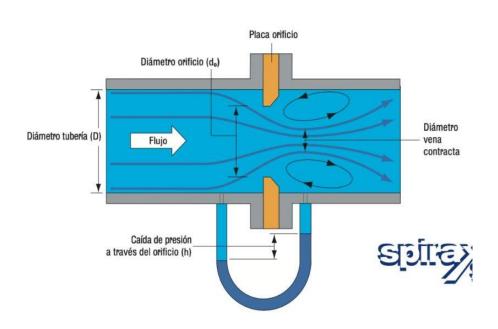

Caudalímetro Tubo venturi

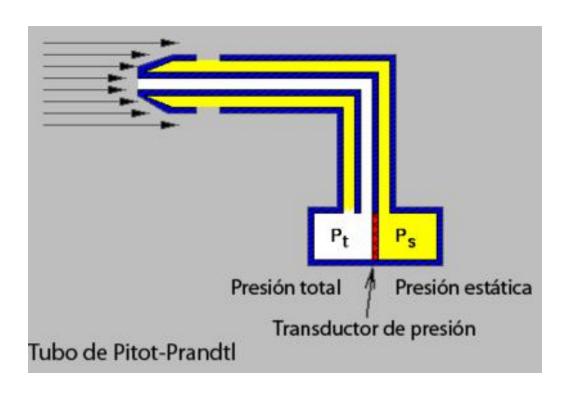

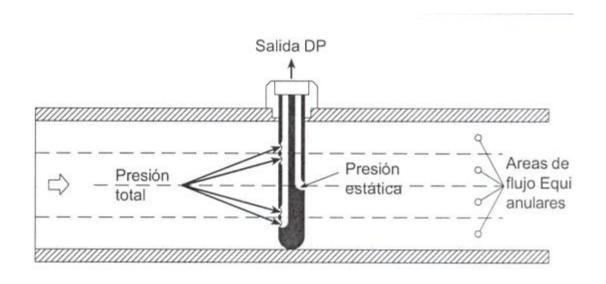

Caudalímetro Placa orificio

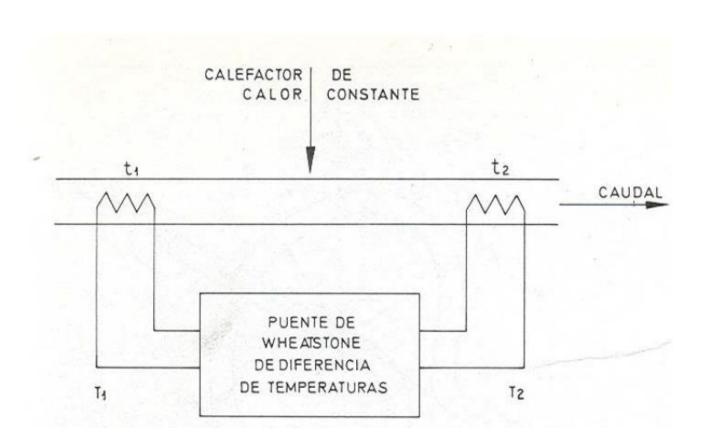

Caudalímetro Tubo pitot

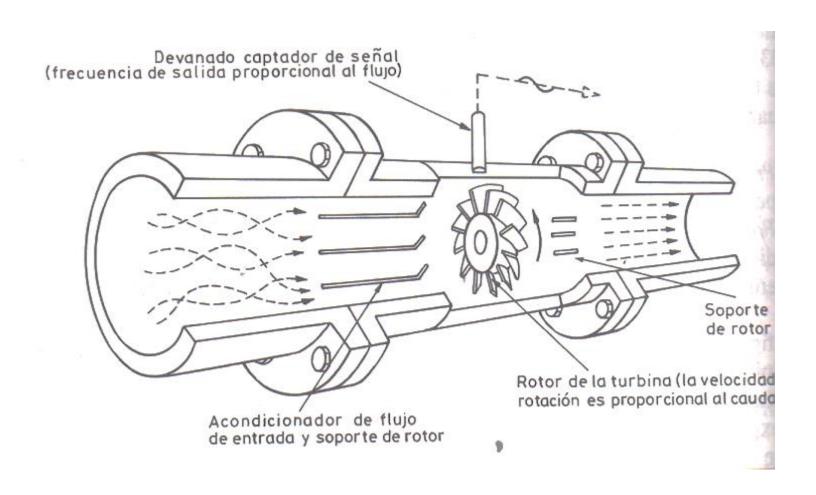

Caudalímetro Tubo annubar

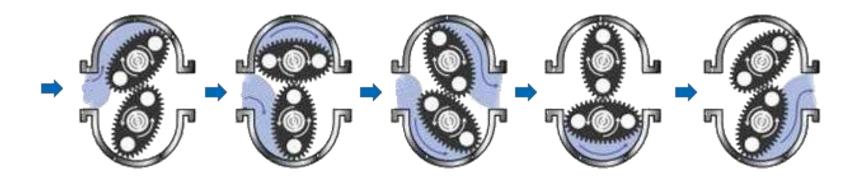

Caudalímetro Térmico

Caudalímetro Turbina

Caudalímetro Desplazamiento positivo

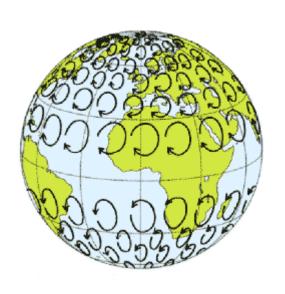

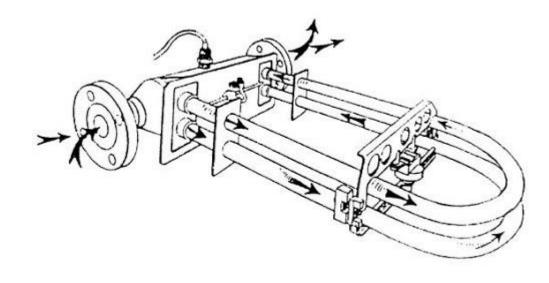

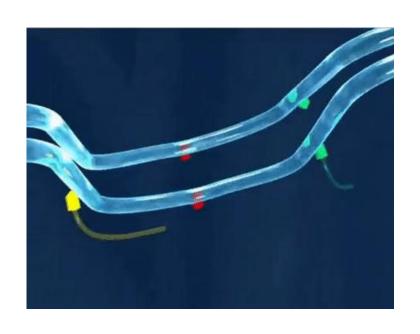

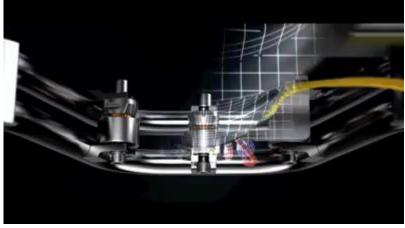

Caudalímetro Principio de Coriolis

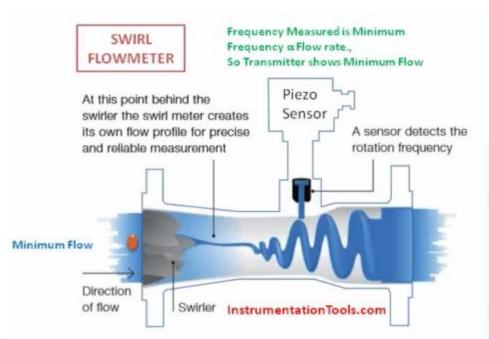

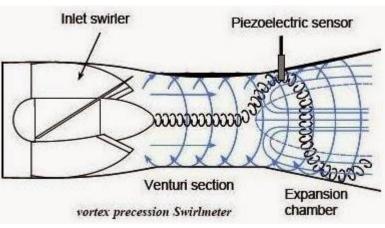

Caudalímetro Principio de Coriolis

Caudalímetro Por torbellino o vórtice

Actuador eléctrico: motor

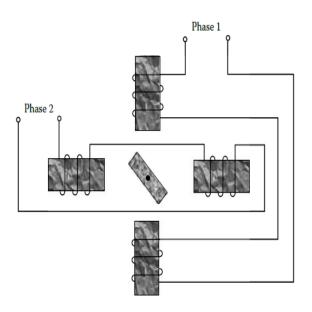

15/04/2023

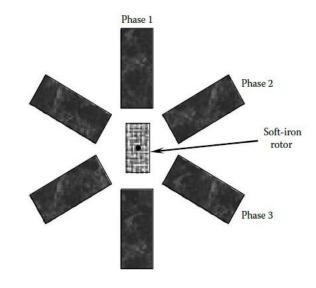

15/04/2023

Actuador eléctrico: motor – paso a paso

Imán permanente

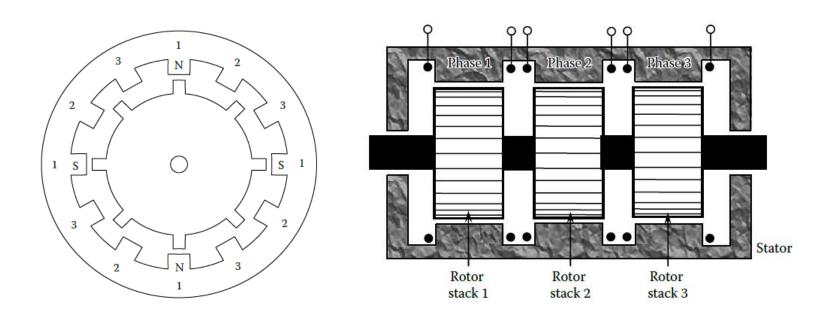

Reluctancia variable

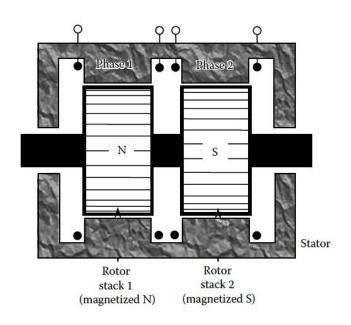

Actuador eléctrico: motor – paso a paso

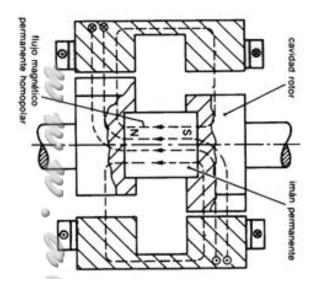

• Reluctancia variable con apilamiento múltiple

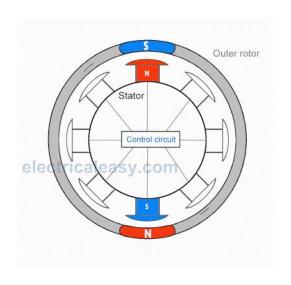

Actuador eléctrico: motor – paso a paso

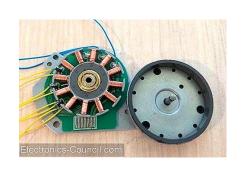

Híbrido

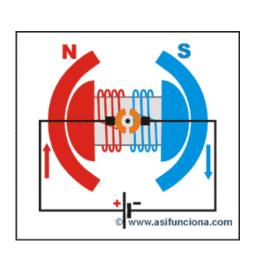

Actuador eléctrico: motor – BLDC

Actuador eléctrico: motor DC – imán permanente

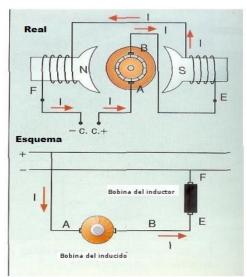

Actuador eléctrico: motor DC

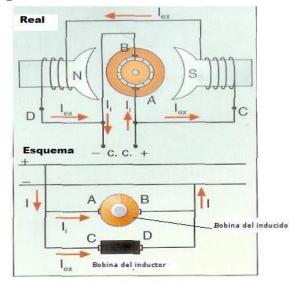

Motor en serie

Motor Shunt

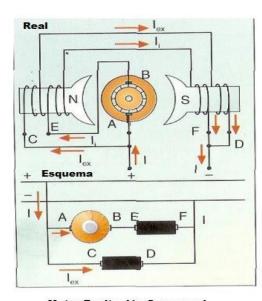

Motor Compound

Motor Excitación Serie

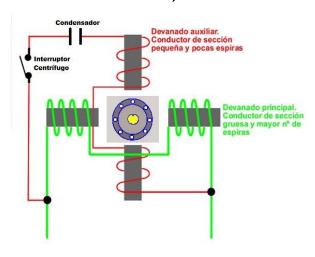

Motor Excitación Paralelo

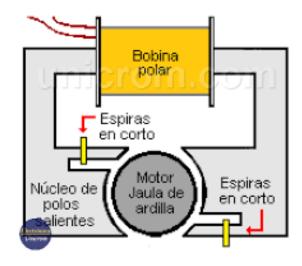

Motor Excitación Compound

Actuador eléctrico: motor AC monofásico

Fase partida (con condensador)

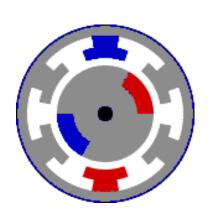

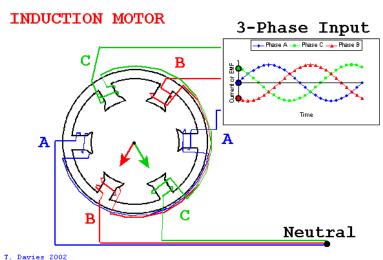

De espira en cortocircuito

Actuador eléctrico: motor AC trifásico

Campo magnético rotatorio

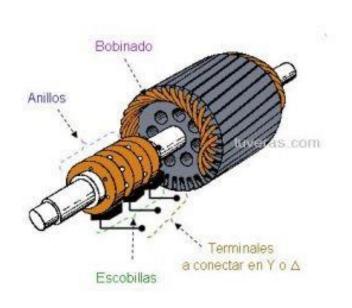

15/4/2023 37

Actuador eléctrico: motor AC trifásico asíncrono

Rotor bobinado

Rotor jaula de ardilla

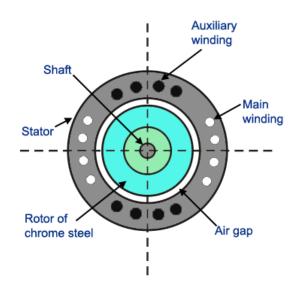

Actuador eléctrico: motor AC síncrono

Motor de reluctancia
 Rotor de histéresis

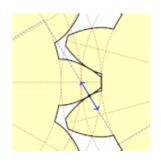

15/4/2023 39

Actuadores mecánicos

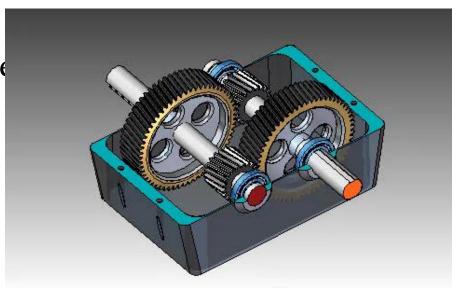

- Reductores
- Cambio de dirección
- Transformación de movimiento

Actuador mecánico reductor: piñón-corona

- Efecto:
 - Reducción de velocidad de
 - Aumento del par motor

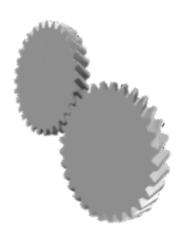

Actuador mecánico reductor: coaxial

- Efecto:
 - Reducción de velocidad de calida
 - Aumento del par motor

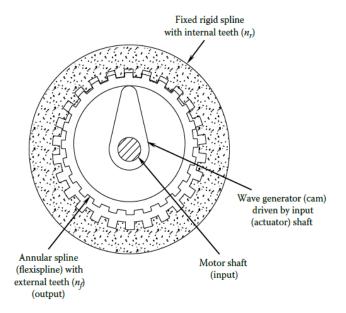

Actuador mecánico reductor: motoreductor

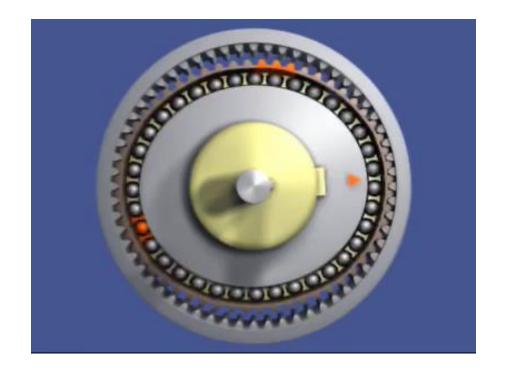

- Efecto:
 - Velocidad rotacional con alto torque

Actuador mecánico: reductor armónico

- Efecto:
 - Reductor de velocidad

Actuador mecánico: cambio de dirección

- Piñon-corona
 - Eje salida ortogonal a eje entrada.

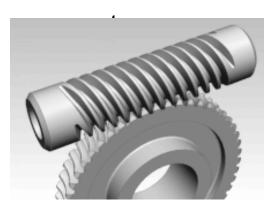

• Reducción de velocidad de salida y aumento del par

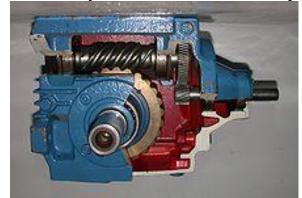

Actuador mecánico: cambio de dirección- Reductor:

- corona tornillo sinfín
 - Eje salida ortogonal a eje entrada.

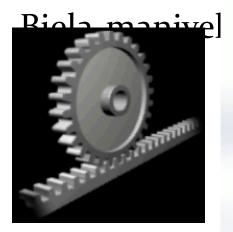

• Reducción de velocidad de salida y aumento del par

Actuador mecánico: transformación de movimiento

Piñon-cremallera Husillo fricción/bolas

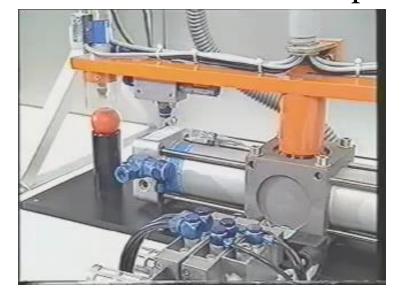

Actuador mecánico: transformación de movimiento

Cilindro pistón de doble efecto con piñón y

cremallera
